
Introduction

Pushes, pull requests and releases can be used as triggers to kick off workflows. A workflow orchestrates a variety of tasks.

Pre-requisites:

- >GitHub
- >Create and manage a repository branch
- >Pull requests and merging
- >Working with YAML
- >User a Dockerfile to create containers
- >Shell scripting

YAML:

- >is not a markup language
- >Programming language for data serialization
- >.yaml or .yml extensions
- >Formatting: indentation, colons, dashes
